Player numbers:
2 or 4 players

Card Setup:
Cards: 40 cards(1-10 for each suit) for 4 player version, or 20 cards(1-10 for each suit) for 2 player version.

Game Target:
The game has no winner but only one loser. When the pile in the middle hits a multiple of 10 the player who played the last card is the loser.

Game Play:
The game has two phases.
Phase 1:
In first phase every player should set up their piles and put them in front of themselves, the piles should be split as a low pile and high pile:

- Low pile contains the following cards: 1, 2, 3, 4, 5
- High pile contains the following cards: 6, 7, 8, 9, 10
- Player can re-arrange the orders of each piles.

Phase 2:
Phase 2 start from the player who most recently played Jenga. In each player's round, they can choose **one card** from the piles with the following restrictions:

- The card must be the top one of the pile
- He can choose either his own piles, or any other player's piles to flip a card from.
- If the previous player choose to flip card from any of the Low piles, the current player cannot flip a card from any of the Low piles they can only flip cards from the High piles.

After you flip the card, the player needs to put the card in the middle of the table(the scoring area), and add the values of all the cards in the scoring area. If the result is exactly the multiples of 10 (say 10, 20, 30, etc), the game ends immediately, and the last player to play a card is the loser.

Sample Game Play:
Player 1 begin the game, he chooses to flip one card from his own Low pile, it's a 1, and he puts that card into the scoring area. Now the total score is 1.
Player 2 continues, now he can choose any High piles, so he choose to flip player 3's High pile top card, it's a 10, he put the card into the scoring area. Now the total score is 11.
Player 3 continues, now he can't choose any High piles, so he choose to flip his own Low pile top card, it's a 3, he put the card into the scoring area. Now the total score is 14.
Then the player 4 goes on. The game ends when the total score is the multiple of 10, and the last player who flip card is the loser.
